

## **Foul Pole Installation Instructions**

1. Dig a hole on foul line in front of fence. Center of hole should be within a few inches or less of fence end pole.
2. Install ground socket in hole precisely on foul line.
3. Place pole in socket. Pack ground around socket so pole is vertical without any angle.
4. Slide foam on top of pole.
5. Use yellow tie wraps (3) to secure to fence end pole (to prevent shifting of foul pole).

Foul pole secured to fence end pole

6. Repeat operation for second foul pole.

Note: Pole may have to be straightened periodically due to wind force and soft ground around socket.
