

Above-Ground Grand Slam™ Fencing Installation instructions

Installation:

1. Roll out Grand Slam® Fencing along the line where it is to be installed.

#1

2. Slide poles into slots woven into fence(#1). Insert each pole beginning in first slot down from yellow top and continue through remaining three slots(#2). Poles are designed to be installed at 10' intervals (slots are woven at 5' intervals for additional poles, if desired.)

#2

End poles are reinforced to minimize bending and should be placed at each end.

3. Attach slot in yellow fence top cap through latch(#3).

#3

4. Complete assembly of weighted base units - 2' pipe should be connected to fitting with hitchpin(#4).

#4

Insert 2' pole into pocket in center of weighted yellow pouch(#5).

#5

#6

Note: Each end pole utilizes 2 weighted yellow pouches that are designed to be outside of the playing/walking area(#6).

5. Begin setting up fence by inserting one fence pole into base starting at one end.

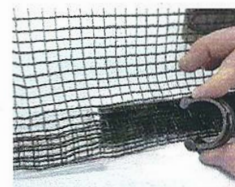

6. Insert poles into weighted base units one-by-one along entire length of fencing. Pull fence taut at each pole to remove sag(#7).

#7

7. C-clamps attach to base pipe in order to hold fence taut at bottom. 2 clamps on each 4' base pipe - one near each end(#8).

#8

Note: Wind force and contact from players or equipment will move poles slightly.
